**Re: MULTIPROP Counterfeits**

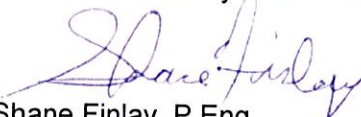

In addition to the letter we previously sent you, the enclosed document provides the means for differentiating between the PERI MULTIPROP and the counterfeit version that we found in circulation.

In summary, the differences are related to the:

- Height adjustment collar (PERI embossing);
- Top and bottom plates (PERI embossing);
- Affixed measuring tape (PERI embossing and riveting);
- Locating notches in the body of the prop; and
- Clip and bolt connecting the clip to the body of the prop.

If you have any questions, please don't hesitate to contact us.

Regards,  
PERI Formwork Systems Inc.

# SAFETY NOTICE

## Counterfeit MULTIPROP in Circulation

It has come to our attention that copies of our MULTIPROP are circulating the market and are being used in combination with our own. The practice of mixing counterfeit articles with Original Equipment Manufacturer (OEM) articles raises significant safety concerns. There is an increased risk of article failure, or even of the collapse of the supported structure. Below is a description of the visual differences between PERI equipment and the counterfeit items.

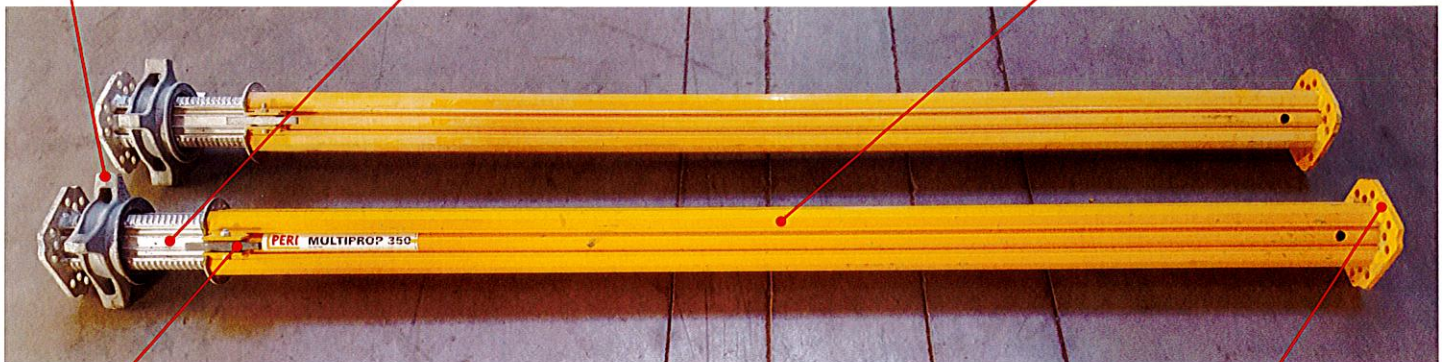

The word 'PERI' is embossed on the underside of the PERI MULTIPROP collar.

The measuring tape inside the PERI MULTIPROP has 'PERI' on it. There is one rivet at each end of the tape, whereas the counterfeit version has rivets along its entire length.

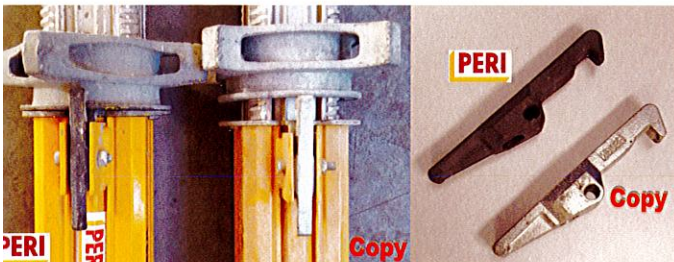

PERI MULTIPROP MP250, 350 & 480 have locating 'notches' on the yellow casing (the MP120 & 625 do not); the counterfeit version does not.

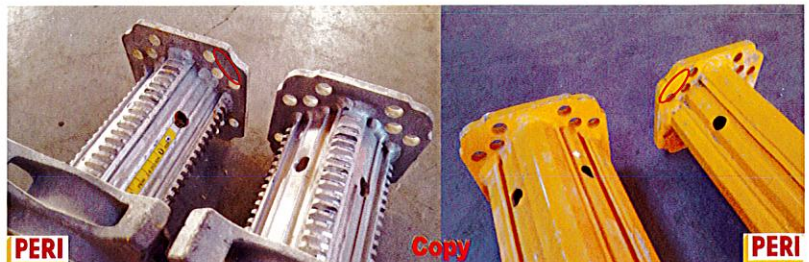

Props side-by-side; PERI MULTIPROP (bottom) and counterfeit version (top).

PERI's manufacturing process results in a dark grey coloured clip; the counterfeit version is more metallic in appearance. The bolt holding this in place is shorter on the PERI MULTIPROP.

Top and bottom plates on the PERI MULTIPROP have 'PERI' embossed in them.
